

What is DNA Day?

DNA Day is a science outreach program in collaboration with the National Human Genome Research Institute (NHGRI) and the North Carolina Department of Public Instruction (DPI) where North Carolina graduate students and postdoctoral fellows visit high school classrooms across North Carolina to provide an interactive activity about the Human Genome Project, the ethical, legal, and social implications of the human genome, and also to talk about careers in science. It is a great way for young scientists to connect with and encourage our future scientists!
